

Medical Clinic

123 Health St, Suite 1 | (800) 000-0000

Patient Name:	John Doe	Date of Birth:	12/25/1980
Medical Record Number:	123456	Insurance Provider:	Blue Cross Blue Shield

Chief Complaint

The patient presents with a chief complaint of experiencing severe chest pain radiating to the left arm and shortness of breath for the past 24 hours.

History of Present Illness

The patient reports a history of hypertension and hyperlipidemia, for which he is currently taking lisinopril and atorvastatin. He also mentions a family history of coronary artery disease. He has been experiencing the described symptoms for the past 24 hours, with worsening symptoms overnight.

Symptoms

- Chest pain radiating to the left arm
- Shortness of breath
- Diaphoresis
- Dizziness

Duration

The patient reports that the symptoms have been present for 24 hours.

Vital Signs

- Temperature: 98.6°F (37°C)
- Blood Pressure: 180/100 mmHg
- Pulse: 120 bpm
- Respiratory Rate: 24 breaths/min
- Oxygen Saturation: 92% on room air

Medications

- Lisinopril 20mg PO daily
- Atorvastatin 80mg PO daily
- Aspirin 81mg PO daily

Allergies

The patient reports no known allergies.

Assessment

Based on the patient's symptoms and medical history, a diagnosis of acute coronary syndrome (ACS) is suspected. The patient will require immediate evaluation and management.

Plan

1. **Cardiac Enzyme Tests:** Order troponin and CK-MB levels to confirm the diagnosis of ACS.
2. **Electrocardiogram (ECG):** Perform an ECG to assess for signs of myocardial ischemia or infarction.
3. **Chest X-ray:** Obtain a chest X-ray to evaluate for pulmonary edema or other complications.
4. **Cardiology Consult:** Refer the patient to cardiology for further evaluation and management.
5. **Pain Management:** Administer oxygen and nitroglycerin as needed to manage chest pain.

Follow-up Recommendations

The patient will require close monitoring and follow-up with cardiology for further evaluation and management. The patient will be scheduled for a follow-up appointment in 48 hours.

Discharge Instructions

1. The patient will need to follow a low-sodium diet and restrict physical activity for the next 48 hours.
2. The patient will need to take their medications as prescribed and report any changes in symptoms to their healthcare provider.
3. The patient will need to schedule follow-up appointments with cardiology as scheduled.
4. The patient will need to contact their healthcare provider immediately if they experience any of the following:
 - Increasing chest pain
 - Shortness of breath
 - Dizziness
 - Confusion
 - Sudden weakness or numbness in the face, arm, or leg
5. The patient will need to inform their healthcare provider of any changes in medications or medical conditions.
