Address:	123 Main St, Anytown, USA 12345		

Chief Complaint

Chest pain

History of Present Illness

The patient presented to the clinic complaining of chest pain that has been ongoing for approximately 2 days. The pain worsens with deep breathing.

Symptoms

- Chest pain
- Shortness of breath
- No dizziness

Duration

The patient has been experiencing symptoms for 2 days.

Vital Signs

- Temperature: 98.6°F (37°C)
- Pulse: 72 beats per minute
- Blood Pressure: 120/80 mmHg
- Respiratory Rate: 16 breaths per minute
- Oxygen Saturation: 98% on room air

Medications

- Lisinopril 10mg daily

Allergies

- Penicillin

Assessment

Based on the patient's presentation, a differential diagnosis of cardiac or pulmonary origin is considered. Further evaluation is necessary to determine the underlying cause of the patient's symptoms.

Plan

1. Order an electrocardiogram (ECG) to evaluate for cardiac ischemia or arrhythmias.
2. Perform a chest X-ray to assess for pulmonary abnormalities.
3. Consider ordering blood work, including cardiac enzymes and a complete blood count (CBC), to evaluate for potential cardiac or pulmonary causes.
4. Schedule a follow-up appointment in 2-3 days to review the results of the diagnostic tests and determine the next course of action.

Follow-up Recommendations

Schedule a follow-up appointment in 2-3 days to review the results of the diagnostic tests and determine the next course of action.

Discharge Instructions

1. Continue taking lisinopril 10mg daily as prescribed.
2. Monitor for worsening symptoms, including chest pain or shortness of breath.
3. Avoid strenuous activities until further instructed by the healthcare provider.
4. Contact the healthcare provider immediately if experiencing any of the following:
 - Sudden, severe chest pain
 - Difficulty breathing
 - Dizziness or lightheadedness
 - Fever over 101.5°F (38.6°C)
